

License Upgrade Registration

Complete the following procedure to upgrade license registrations.

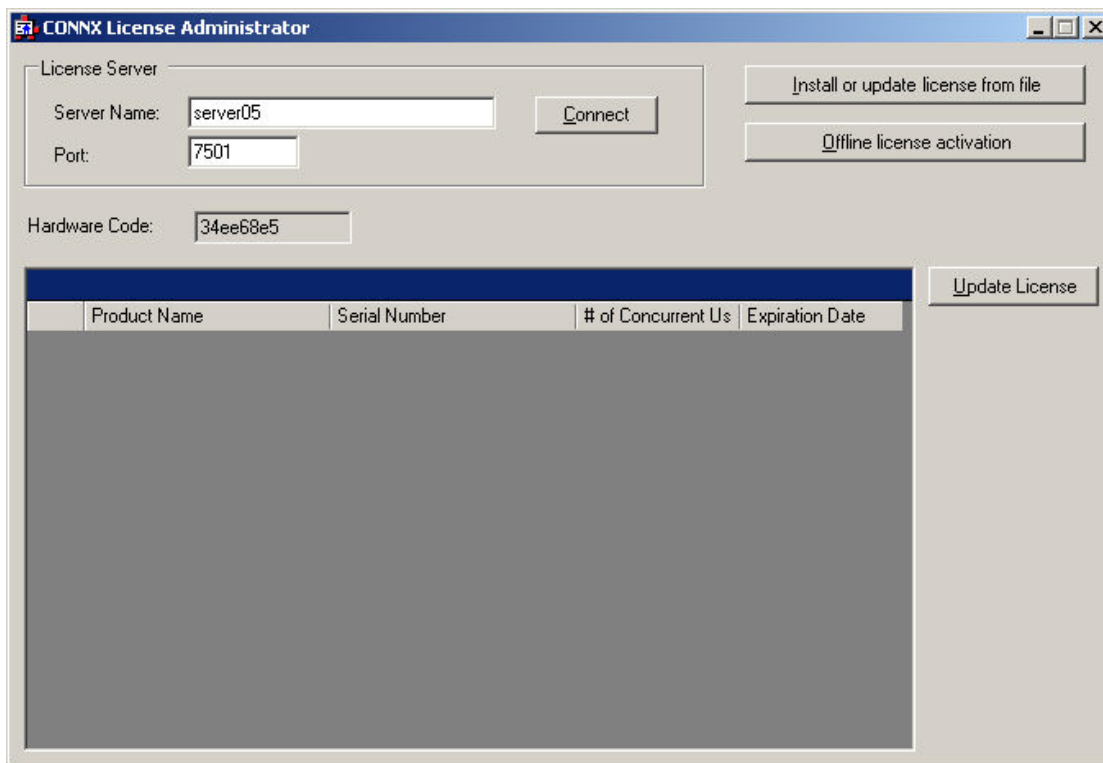

Important: If you *uninstall CONNX* using the *Add or Remove Programs* applet in the *Windows Control Panel*, be sure you copy any *.cdd* files that you may have created and stored in the *CONNX32* folder structure to another location on your hard drive.

1. On a CONNX client computer on which the CONNX Administrator component is installed, click the Start button, and then point to Programs. Click CONNX X, and then click CONNX License Registration. The CONNX License Registration window appears.

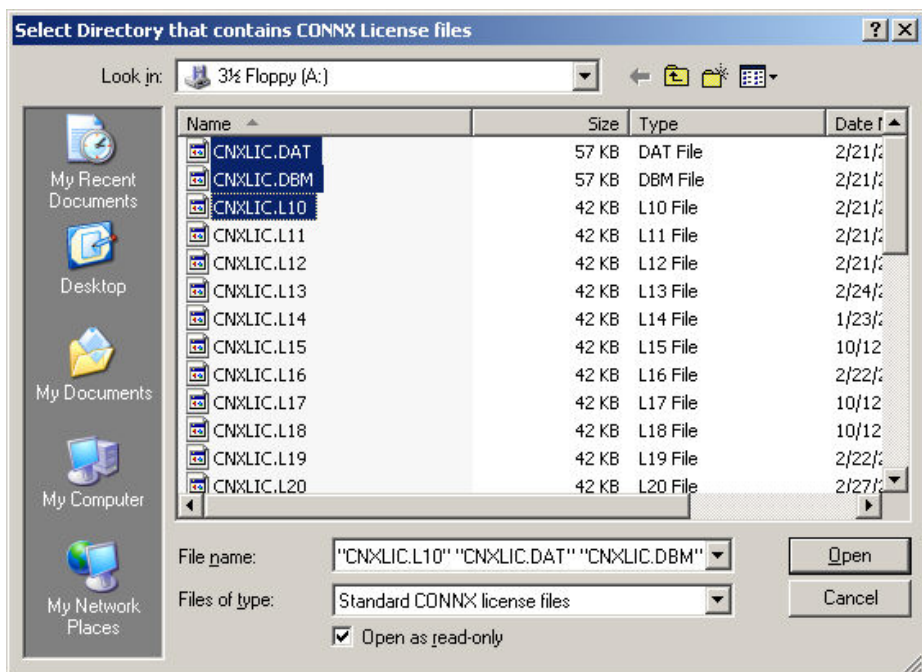

The server name and port should be pre-populated with the correct CONNX license server, based on selections during installation. If the server name and port are not correct, enter the proper information. Press Connect.

2. Once connected to a license server, the Install or Update license from file button, Offline license activation button, and Update license button become enabled. Additionally, the hardware code of the license server (only required for off-line license activation) is displayed. If the computer running the license administrator has internet access, then proceed with online license activation by selecting either the Install or Update license from file button, or the Update license button. .

3. If you have one or more license files that need to be installed and activated, select the Install or Update license from file button.

4. Select the appropriate license files for installation and activation. If you have a license diskette with all license files on it, you can sort by date and only select the valid license files purchased. Multiple files can be selected by holding down the CTRL or SHIFT key. Press Open once the appropriate files are selected.
5. After several seconds, the License Installed/Updated Successfully window appears, confirming valid registration and activation.

6. Click the X button in the CONNX License Administrator window, or conduct any additional license upgrade procedures, as required.

Updating an existing license

1. On a CONNX client computer on which the CONNX Administrator component is installed, click the Start button, and then point to Programs. Click CONNX X, and then click CONNX License Administrator. The CONNX License Administrator window appears. The server name and port should be pre-populated with the correct CONNX license server, based on selections during installation. If the server name and port are not correct, enter the proper information. Press Connect.

Done Trusted sites

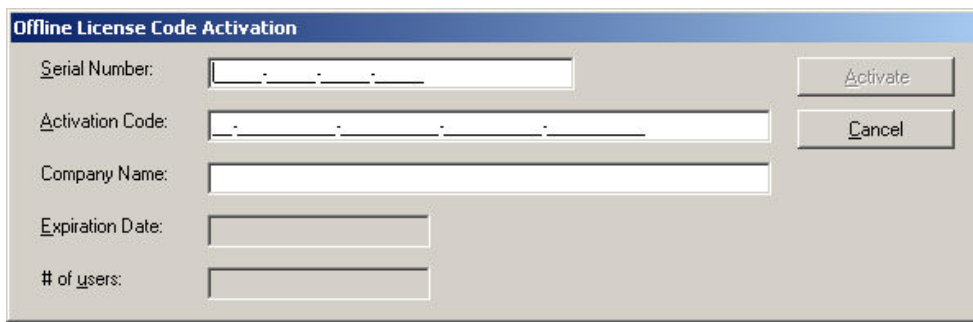

3. Supply the Serial Number, Company Name, and License Code from the license certificate faxed or emailed as part of the CONNX package.
4. Supply the Hardware code that is reported in the CONNX License Administrator Dialog from the computer that does not have internet access.
5. Press Generate Activation
6. Write down the Activation Code supplied.
7. On a CONNX client computer on which the CONNX Administrator component is installed, click the Start button, and then point to Programs. Click CONNX X, and then click CONNX License Administrator. The CONNX License Administrator window appears. The server name and port should be pre-populated with the correct CONNX license server, based on selections during installation. If the server name and port are not correct, enter the proper information. Press Connect.

8. Once connected to a license server, the Install or Update license from file button, Offline license activation button, and Update license button become enabled. Additionally, the hardware code of the license server (only required for off-line license activation) is displayed. If the computer running the license administrator has internet access, then proceed with online license activation by selecting either the Install or Update license from file button, or the Update license button.

9. Select the Offline license activation button.

The dialog box is titled "Offline License Code Activation". It contains five input fields: "Serial Number:" with a mask of four dashes, "Activation Code:" with a mask of four dashes, "Company Name:" (a long text field), "Expiration Date:" (a date field), and "# of users:" (a text field). On the right side, there are two buttons: "Activate" and "Cancel".

10. Supply the serial number, activation code (code received from web page .. starts with AV-), and company name. Press Activate.
11. After several seconds, the License Installed/Updated Successfully window appears, confirming valid registration and activation.

12. Click the X button in the CONNX License Administrator window, or conduct any additional license upgrade procedures, as required.
